## Service information

**You have been referred to the Advara HeartCare cardio-oncology clinic.**

There is a small chance that some cancer treatments can affect normal heart function. In the early stages there may be no symptoms of abnormal heart function, so screening with heart ultrasound (an echocardiogram) is recommended. Treatments are available to treat abnormal heart function and are more effective if started early.

## What can you expect next?

As part of this service you will see a nurse and a cardiologist as well as have an echocardiogram which is a painless test with no associated risks.

- There are **no out of pocket costs** for any aspect of this service
- Please bring a list of your current medications with you to your appointment
- Please bring this referral with you to your appointment

If you would like more information about Advara HeartCare or the echocardiogram procedure, please visit our website:
