

Primary Care Echocardiogram & Holter Services

Cardiac testing that works with your practice

Cardiac testing that works **with your practice**

At Advara HeartCare, our purpose is to improve Australia's heart health. To do this, we are committed to delivering care in a way that works for patients, referrers and healthcare partners.

We partner with primary care providers to bring Holter monitoring and echocardiogram services directly into the clinic. Our patient-centred model expands access to cardiac diagnostics, integrates into existing workflows and connects practices with the expertise of Australia's largest cardiology network.

Cardiac diagnostics, delivered closer to home

Accessing cardiac testing can be inconvenient for patients and increasingly operationally complex for practices.

Our integrated service model helps address both challenges.

Patients can undergo noninvasive cardiac testing in the familiar environment of their local clinic. Practices gain access to specialist-led diagnostic services without needing to establish a standalone cardiac testing operation.

Advara HeartCare provides the equipment, clinical resources, training, reporting infrastructure and ongoing support required to help the service run effectively.

The result is a practical, scalable model that supports timely diagnosis, continuity of care and improved access to specialist cardiac expertise.

Why partner with Advara HeartCare?

Patient-centred care

Patients remain under the care of their usual healthcare team while accessing cardiac diagnostics in a familiar environment. Where further assessment is required, patients can access a clear referral pathway through the Advara HeartCare network, supporting continuity across the patient journey. Testing is reviewed and reported by experienced cardiologists, helping support timely clinical decisions and appropriate follow-up.

Seamless integration into your workflows

Our services are designed to work with your existing clinical and administrative processes

We provide:

- ✓ equipment and technology
- ✓ setup support
- ✓ staff training clinical and operational resources
- ✓ secure reporting workflows
- ✓ ongoing service support

Clinician-friendly reports are returned securely to your practice management software. Reporting cardiologists are also available to discuss important clinical findings with referring doctors.

Expanded diagnostic services

Integrating Holter monitoring and echocardiography into your clinic allows you to offer a broader cardiac diagnostic service to your patients

This can help:

- ✓ reduce the need for off-site testing
- ✓ improve access to investigations
- ✓ support earlier diagnosis
- ✓ reduce delays between referral, testing and follow-up
- ✓ strengthen continuity of care
- ✓ enhance the patient experience

Specialist-led reporting

Reporting is delivered through Advara HeartCare's cardiology network, with structured clinical oversight and quality assurance.

This provides access to:

- ✓ experienced cardiologists
- ✓ consistent reporting standards
- ✓ clinical governance
- ✓ escalation pathways for urgent or complex findings
- ✓ specialist support for referring doctors
- ✓ dependable reporting capacity

FLEXIBILITY

A scalable service model

Accessing cardiac testing can be inconvenient for patients and operationally complex for practices. Our integrated service model helps address both challenges. Cardiac diagnostics, delivered closer to home

Our model is designed to adapt.

Echocardiogram clinics can be scheduled weekly, fortnightly or monthly, depending on referral volumes and local demand. Holter monitoring can be incorporated into routine clinic workflows, with trained practice staff applying the device and managing the patient appointment

This enables **Advara HeartCare** to support:

- ✓ changing patient demand
- ✓ service growth over time
- ✓ flexible operating requirements
- ✓ fast report turn around time
- ✓ urgent and time-sensitive cases
- ✓ after-hours support where agreed

Behind the service is a scalable cardiologist workforce supported by clinical governance and ongoing quality assurance

HOW THE SERVICE WORKS

Echocardiograms

An echocardiogram is a non-invasive ultrasound test used to assess the structure and function of the heart. It is commonly used to investigate a range of clinical indications and may help identify cardiac conditions that are not immediately apparent through symptoms alone.

Echocardiography can support:

- ✓ identification and diagnosis of heart disease
- ✓ assessment of cardiac structure and function
- ✓ development of appropriate treatment plans
- ✓ monitoring of known cardiac conditions
- ✓ informed clinical decision-making

Advara HeartCare brings the service directly to your practice.

We provide:

- ✓ portable ultrasound equipment
- ✓ a qualified cardiac sonographer
- ✓ secure cloud-based image transfer
- ✓ specialist cardiologist reporting
- ✓ access to a web-based image and reporting portal
- ✓ secure transfer of reports into your practice management software

A suitable clinic room, internet access and a patient bed are generally all that is required.

The visiting schedule is developed with your team and can be adjusted as referral demand grows.

HOW THE SERVICE WORKS

Holter Monitoring

Holter monitoring continuously records a patient's heart rhythm, usually over 24 to 48 hours. It can assist in identifying abnormal rhythms or conduction issues that may not be detected during a standard electrocardiogram. The service is designed to become part of your normal clinic workflow

24-48hrs

continuous heart rhythm recording

The service is designed to become part of your normal clinic workflow.

Advara HeartCare provides:

- ✓ Holter monitoring devices
- ✓ software and technical infrastructure
- ✓ staff training
- ✓ implementation resources
- ✓ specialist cardiologist reporting
- ✓ ongoing operational assistance

Your trained staff apply the monitor to the patient. Once the recording is complete and the data is uploaded, the study is reviewed and a clinician-friendly report is returned securely to the practice.

This allows patients to access testing through the clinic they already know, while their usual doctor remains central to their care.

QUALITY & ASSURANCE

Reliable reporting and clinical support

Timely reporting matters, particularly when results may affect diagnosis, treatment or referral decisions.

Our service model is designed to support:

- ✓ dependable turnaround times
- ✓ timely review of routine studies
- ✓ escalation of critical or urgent findings access to reporting cardiologists for clinical discussion
- ✓ consistent reporting across services
- ✓ after-hours clinical support where required
- ✓ paediatric reporting capability where appropriate

Turnaround times, escalation pathways and coverage arrangements are agreed with each practice to support local clinical and operational requirements.

Clinical governance and quality

Advara HeartCare's reporting model is supported by structured clinical oversight and quality assurance.

This helps provide:

- ✓ consistent reporting standards
- ✓ clear clinical accountability
- ✓ reliable review processes
- ✓ appropriate escalation
- ✓ ongoing service improvement
- ✓ confidence for referring doctors

NATIONAL SCALE, LOCAL EXPERTISE

Designed for **long-term partnership**

Our role is not limited to providing equipment or returning reports.

We work with each practice to establish a service that is practical, sustainable and aligned with patient demand.

Over time, this may include:

- refining workflows and processes
- improving system integration
- reviewing service capacity
- increasing clinic frequency
- supporting higher testing volumes
- strengthening referral pathways
- expanding access to specialist expertise

Why Advara HeartCare?

Advara HeartCare combines national scale with local clinical expertise.

Our network provides:

- ✓ experienced cardiologists across Australia
- ✓ specialist cardiac reporting
- ✓ established clinical governance
- ✓ scalable operational systems
- ✓ reliable service delivery a national platform that can support future growth
- ✓ continuity of care through a broader cardiology network

Backed by Australia's largest cardiology network and a nationally scaled operating model, Advara HeartCare is well placed to support practices as their cardiac testing needs grow.

WITH YOU AT EVERY STEP

Supporting your practice from setup to ongoing delivery

We support your team throughout the life of the service.

This includes:

- 1 service planning
- 2 workflow design
- 3 equipment setup
- 4 staff training
- 5 implementation support
- 6 reporting integration
- 7 ongoing clinical support
- 8 ongoing operational support
- 9 service review and optimisation

Better access to cardiac care starts in the community

By bringing echocardiography and Holter monitoring directly into primary care, practices can improve access to cardiac diagnostics while keeping patients connected to the healthcare team they trust.

Advara HeartCare provides the clinical expertise, technology, systems and support required to make the service work.
